

7 EFFICIENCY-FIRST INTEGRATIONS TO LEVERAGE WITHIN YOUR VMS

Have you thought about how to get the most out of your vendor management system (VMS)? Integrations in a VMS can drive efficiency, reduce manual effort, decrease risk, and save costs by harnessing multiple HR tools and apps that enhance your contingent workforce management program.

Here are seven functionalities and platforms to consider integrating:

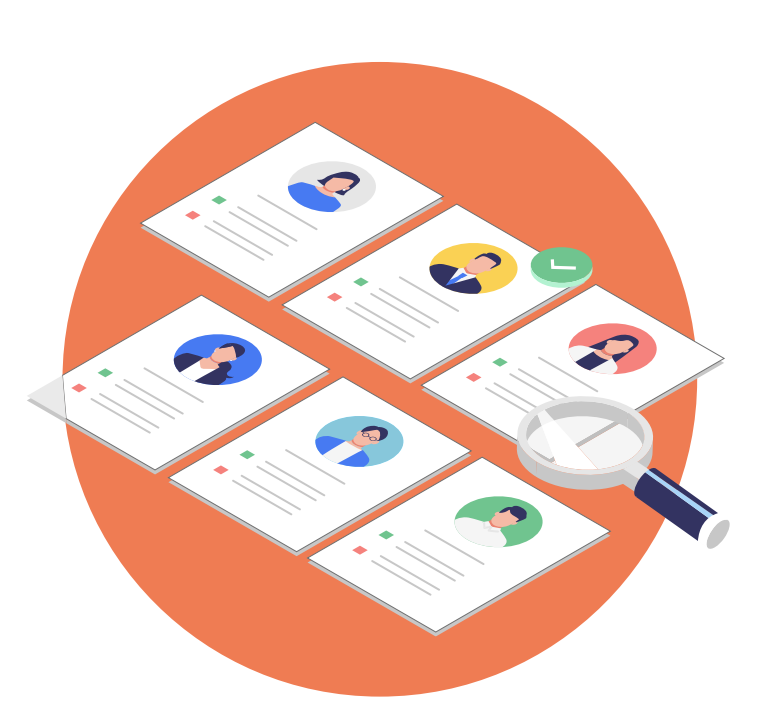

1. TIME-KEEPING

Apps to track and log the time dedicated to tasks or projects.

2. SCHEDULING

Apps for faster, more efficient appointment and call scheduling.

3. BACKGROUND CHECKING

Software to verify the candidate's details submitted during the application.

4. DIRECT SOURCING

An approach for organizations to leverage their own brand to attract candidates. This allows companies to reach qualified talent and easily organize incoming candidates into categories to quickly match new opportunities.

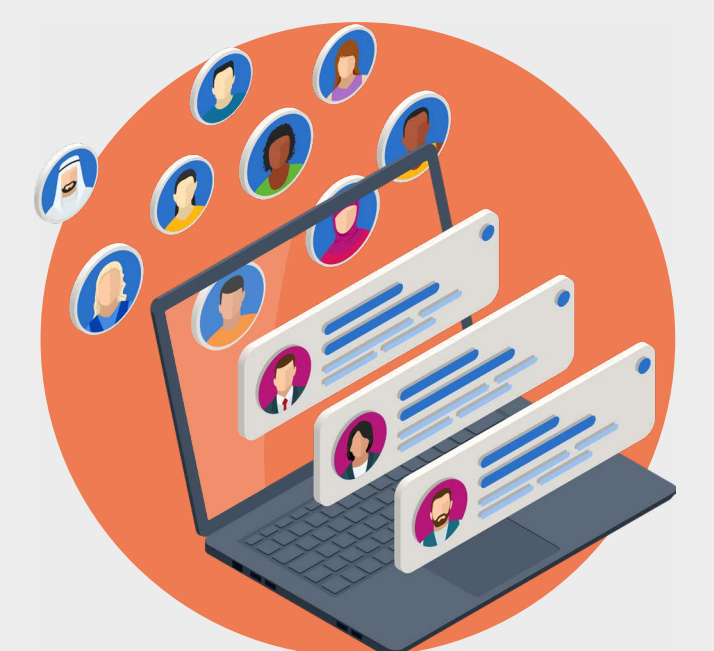

5. HUMAN RESOURCE INFORMATION SYSTEM (HRIS)

Software to automate and streamline HR management tasks. HRISs are designed to handle employee information, track employee records, and provide access to vital data such as worker attendance, job histories, and performance evaluations.

6. APPLICANT TRACKING SYSTEM (ATS)

Software to manage and automate an organization's hiring process, typically for full-time employees. ATSs enable hiring managers to easily view and track candidate progress throughout the process, from applied to hired.

7. ENTERPRISE RESOURCE PLANNING (ERP) SYSTEM

Software that facilitates the management of core activities essential for the healthy functioning of a company. These activities include project management, supply chain operations, manufacturing, and accounting.

INTEGRATIONS WITHIN VECTORVMS

Does your VMS offer all these integrations? It certainly should! **Talk to us** to find out how VectorVMS can help you gain efficiencies with secure integrations.
